

Range of **KIA** Military Vehicles on Display

Kia's Light Tactical Vehicle (KLTV) is the Korean Armed Forces' first-ever multi purpose tactical vehicle, developed with a modular system that enables various versions including standard and long-wheel base along with armoured and unarmoured features.

Production of KLTV began June 2016, with wide range of versions such as tactical command & reconnaissance, weapons platform and other field support variants.

The armoured reconnaissance vehicle has been developed with an enhanced protection system that satisfies customer's requested STANAG level and boasts much stronger competitiveness in mobility, protection and price among competitors under 7-ton gross weight vehicles.

Meanwhile, Kia's Light Tactical Cargo Truck is an unarmoured long wheel based vehicle providing various add-on superstructure including cargo box, workshop and communication vans.

It carries 10 fully-armed soldiers in the rear troop seats and loads up to 3 tons of cargo on off-road, boasting optimal competitiveness in mobility, durability and price among competitors under 7-ton gross weight vehicles.

Its key feature includes cutting-edge technology and military purpose specifications such as Euro 5 diesel engine with 225 horse power, 8 speed automatic transmission, 4 wheel drive gear box, independent suspension, air conditioning, no spin differential, run-flat tire and electro-magnetic interference.

Research Centre for Military Vehicles

KIA Motors operates the first and sole military vehicle research centre in Korea with staff comprising world class experts. According to the company website, the research centre executes jobs including integration of various types of standard vehicles and development of models exclusively for military uses. ●
